

The Carrington Event Revisited

This is the story of a catastrophic solar coronal mass ejection event similar to the one that hit the Earth in 1859. This story follows a man trying to survive in world that is much harsher than the one he grew up in but one in which he is determined to overcome despite all obstacles. This early story was published under the pen name of Jack Forester. I have gone through this story and found many of the errors and corrected them (no Im sure I did not find them all!). I have re-written sections and added additional material as I have gone through this early work of mine. As always in my stories there is no foul language or explicit sex though there is some violence.

My stories are only meant to provide an afternoon or evening of reading enjoyment. If when reading any story you find that an occasional grammatical error spoils your whole experience then you may wish forgo reading this story as I am sure some errors can be found within it despite my best efforts.
