

Neoplastic Hematopathology: Experimental and Clinical Approaches (Contemporary Hematology)

Fulfilling the void with a Hematopathology book that integrates clinical and experimental studies with diagnostic criteria, Neoplastic Hematopathology: Experimental and Clinical Approaches provides an overview of the discipline of hematopathology that connects the field with recent advances in immunology research and current clinical practice in the treatment of lymphomas and leukemias. Designed for both trainees and specialists in pathology and hematology-oncology, Neoplastic Hematopathology: Experimental and Clinical Approaches has separate sections on laboratory techniques, diagnostic hematopathology, treatment and stem cell transplantation. Expert chapter authors address both myeloid and lymphoid tumors, and provide much needed coverage in transplant biology. A study guide highlights key chapter points, making the text suitable for boards review in hematopathology and hematology-oncology.
